The invention refers to a plate heat exchanger and a method for its manufacture. The plate heat exchanger includes a number of heat exchanger plates (1), which are substantially parallel to an extension plane and arranged adjacent to each other in a plate package (2). A first end plate (8) and a second end plate (9) are arranged on a respective side of the plate package. A first tie sheet (10) and a second tie sheet are arranged on a respective side of the plate package substantially perpendicular to the extension plane. At least one connection member (17) extends between said tie sheets outside one of the end plates (9) and at least one beam (16) extends outside the second end plate (8) in parallel to an extension plane in engagement with said attachment of each tie sheet (10).

The cited documents represent the general state of the art, and the invention defined in claims 1-22 is not disclosed by any of these documents. The cited prior art does not give any indication that would lead a person skilled in the art to the claimed heat exchanger or manufacturing method. Hence, the invention defined in claims 1-22 is novel and is considered to involve an inventive step. The industrial applicability is evident.
